

The first of these is the
 fact that the population
 of the world is increasing
 rapidly. This is due to
 a number of factors, the
 most important of which
 are the increase in the
 birth rate and the decrease
 in the death rate. The
 birth rate has increased
 because of the improvement
 in the standard of living
 and the increase in the
 life expectancy. The
 death rate has decreased
 because of the improvement
 in medical science and
 the increase in the
 standard of living. The
 result of these two factors
 is a rapid increase in the
 population of the world.
 This increase in population
 has led to a number of
 problems, the most
 important of which are
 the shortage of food and
 the increase in pollution.
 The shortage of food is
 due to the fact that the
 land is being used more
 intensively and the
 soil is becoming more
 infertile. The increase
 in pollution is due to the
 fact that there are more
 factories and more cars.
 These two problems are
 closely related and must
 be solved together. The
 solution is to improve
 the standard of living
 and to reduce the birth
 rate. This can be done
 by providing better
 education and health
 care. The result will be
 a more stable and
 prosperous world.
