

12  
was buried in a hole in the  
ground where it was found.  
It differed from others  
in having two lateral lobes  
projecting from the base of the  
petals above the stamens.  
The lobes were also broader  
and the stamens were longer  
than in other species of the  
same genus. The flower  
was about 10 mm. long  
and the leaves were  
about 15 mm. long.  
The plant was  
about 1 m. tall  
and branched at the top.  
The flowers were  
yellow and  
sweet smelling.
