

The first of these is the  
 fact that the number of  
 cases is increasing  
 rapidly. This is due to  
 the fact that the disease  
 is highly contagious and  
 is spread by direct  
 contact with the patient  
 or by contact with his  
 clothing or other articles  
 which he has used. It is  
 also spread by the air  
 in the case of the  
 influenza type. The  
 disease is usually  
 accompanied by a  
 high fever and a  
 sore throat. In some  
 cases it may be  
 accompanied by a  
 cough and a  
 runny nose. The  
 disease is usually  
 self-limiting and  
 lasts for about a  
 week. In some cases  
 it may be more  
 severe and last for  
 several weeks. In  
 some cases it may  
 be fatal.

The second of these is the  
 fact that the disease is  
 spreading rapidly. This  
 is due to the fact that  
 the disease is highly  
 contagious and is spread  
 by direct contact with  
 the patient or by contact  
 with his clothing or other  
 articles which he has  
 used. It is also spread  
 by the air in the case  
 of the influenza type.
