

The first of these is the fact that the
 world is not a uniform whole, but
 is divided into many different parts,
 each of which has its own peculiar
 characteristics and qualities.

The second is that the world is not
 a static entity, but is constantly
 changing and evolving.

The third is that the world is not
 a simple, uncomplex whole, but is
 a complex, multi-layered system,
 in which the different parts are
 interconnected and interdependent.

The fourth is that the world is not
 a random, chaotic system, but is
 a system that follows certain
 laws and principles.
