

The first of these is the fact that the
 number of letters in the alphabet is
 not the same as the number of words in
 the language. This is because many
 words are composed of several letters,
 and some letters are used in many
 different words. For example, the
 letter 'e' is one of the most common
 letters in the English alphabet, and it
 appears in many different words, such
 as 'the', 'be', 'see', and 'we'. This
 means that the letter 'e' is used in
 many different contexts, and it is not
 always used in the same way. This is
 why the number of letters in the
 alphabet is not the same as the number
 of words in the language.
