

At present the ground is unproductive
 the vegetation is the same as before
 but the water is so low that
 it is not possible to cultivate
 the land as before. The water
 is so low that it is not possible
 to cultivate the land as before.
 The water is so low that it is not possible
 to cultivate the land as before.
 The water is so low that it is not possible
 to cultivate the land as before.

The water is so low that it is not possible
 to cultivate the land as before.
 The water is so low that it is not possible
 to cultivate the land as before.
 The water is so low that it is not possible
 to cultivate the land as before.

The water is so low that it is not possible
 to cultivate the land as before.

The water is so low that it is not possible
 to cultivate the land as before.
 The water is so low that it is not possible
 to cultivate the land as before.
