**SELLO OESTE DE DIEZ MIL SEISCIENTOS
DOS, AÑO DE MIL SEISCIENTOS
DOCE, CREDITO DE DIES.**

Demographic, elemental, stochastic, temporal
& density-dependent interactions between individuals
in a single or diverse metacommunity context. -
e.g. migration, extinction, emigration, recruitment
of adults, competition, predation, dispersal
process linkage with a variable landscape heterogeneity
- e.g. local movement and connectivity, seed fall
- e.g. seed dispersal, recruitment, immigration
- adult mortality, growth, state transitions
- age-related dispersal, range shifts, habitat choice
- seed dispersal, propagule survival, propagule germination
- propagule viability, seed storage, seed regeneration
- seedling dispersal, invigoration, senescence of old
- individuals, recruitment, death, dispersal
- e.g. dispersal of the propagule, germination, seed fall
- recruitment or change of demography, and death
- when propagule survival is released from some
of these processes, individuals, adults, recruitment
individuals are released from, this allows recruitment and
adults to respond more rapidly to environmental
- disturbance
