Several species can withstand freezing at 20° F. for
an interval period. Doves will remain
afloat on snowdrifts aged down to 10° F.
perhaps because they are cold. Some
strayed at dove marshes were found

and was a rather curious one. It was
very pale yellowish. The record was off ~~at~~ ^{at} 1000 ft.
and up into the hills where ~~at~~ ^{at} 1000 ft.
there were still small tufts of grass and
cottonwood saplings off ~~at~~ ^{at} 1000 ft.
There were a number of large shrubs
and small trees. The ground was
covered with a thin layer of fine sand
and some small stones and pebbles.

which winds often appear raised from several
other means. These slopes of sand may receive
the aqueous streams so easily that in them
water is seen at various stages of
