SEU LOOCVARTO, DIEZ MARAVE-
DOS, AÑO DE MIL Y SEISCIENTOS
Y OVARENTA Y OGHO. —

enfogacion del de que se calo no importa recordar que
esta es una memoria de lo que acuerda la memoria de
que nadie nos dio decir de lo que en su juicio la gente de la
ciudad en cada legado de la creencia popular tiene cuando
cada religión tienen sus señales de su fundación

Mondays 8th ~~of~~

There are three main types of flowering plants. The first is called
angiosperms. These have flowers and fruit. They are divided into
two groups: monocots and dicots. Monocots have one seed leaf
and are found in grasses, lilies, and palms. Dicots have two seed
leaves and are found in trees, shrubs, and flowers. The second type
of plant is called a gymnosperm. These are conifers like pine,
spruce, and cedar. The third type is called a fern. Ferns are
non-flowering plants that grow in moist, shaded areas. They have
fronds with sori on them where spores are produced.
